CEHA and EHICT Onsite Training for Septic System Final Inspections

On October 19th, 2021, Connecticut Environmental Health Association (CEHA) and the Environmental Health Institute of Connecticut (EHICT) will offer a one-day field inspection training program for Connecticut Certified Inspectors of subsurface sewage disposal systems.

This will be an all-day outdoor training course with a team of experienced local health department/district inspectors and Connecticut DPH staff providing instruction in five areas of field inspection techniques and methodologies for conducting thorough code-compliance inspections of newly installed septic systems. EHICT is building a state-of-the-art facility in the town of Ellington to display a variety of complete septic systems and septic system components in their properly installed state, ready for inspection.

Topics covered will include:

- Observing how soil conditions identified in test pits relate to the septic system design elevations and

conducting a pre-construction staking inspection.

- Determining horizontal separating distances in the field.
- Using lasers, levels and transits to check vertical separation distances, elevations and slopes.
- Identification and inspection of various types of septic system products including couplings, clean-outs, piping, tanks, pumps, risers, safety devices, distribution boxes, vents, inspection ports and leaching systems.
- Documenting field observations for compliance with the CT Public Health Code and Technical Standards.

This program is intended for Phase 1 certified local health inspectors with limited septic system inspection experience. Attendees will learn how to conduct a final septic system inspection, which critical steps and details to focus on during the inspection and why these steps and techniques are important. If you are interested in attending this septic system field inspection training, please register using the form link below for this new field training program developed for environmental health professionals in Connecticut.
